Risk and reward profile

- This indicator shows how much a fund has risen and fallen in the past, and therefore how much a fund's returns have varied. It is a measure of a fund's volatility. The higher a fund's past volatility the higher the number on the scale and the greater the risk that investors in that fund may have made losses as well as gains. The lowest number on the scale does not mean that a fund is risk free.
- The fund has been classed as 5 because its volatility has been measured as above average.
- This indicator is based on historical data and may not be a reliable indication of the future risk profile of this fund.
- The risk and reward profile shown is not guaranteed to remain the same and may shift over time.
- Currency Risk: As the fund invests in overseas securities, movements in exchange rates may, when not hedged, cause the value of your investment to increase or decrease.
- Counterparty Risk: As the fund may enter into currency hedging arrangements there is a risk that other parties may fail to meet their obligations. This may lead to delays in receiving amounts due to the fund, and the fund receiving less than is due or receiving nothing.
- Concentrated Fund: The fund may hold a large weighting in a small number of investments and may therefore be subject to larger than normal swings in its value.
- For full details of the fund's risks, please see the prospectus which may be obtained from the address in 'Practical Information' below.
